

Remakery Vision

1. Engage people who would not usually be interested
↓ How does reaching out get to these people?
2. Away from incineration
↓ How can Remakery influence that?
3. Research for household- wide demographic
↓ How broken is your house?
4. E waste
↓ There are enterprises that specialise- how could more be created?
5. How do employability and waste come together?
↓ Edinburgh College? Apprenticeships? City and Guilds??
6. Narrative sharing- that links up with job creation
7. Stickers on bins- communication
↓ Pilot – letting people know what facilities are out there
8. Linking up resources, Changeworks and Remakery
↓ Creating platforms?
9. Could the Bio-economy etc be interlinked with reuse e.g. using new materials to connect with the goal . its not about for crafts
↓ But up cycling is not the primary goal?
10. Links with organisations
↓
(Warp it) Could this get more worth this way ? this would mean that more people knew about it Edinburgh warp it ☆> NHS Lothian ☆CONTACT

Remakery Challenges

- ◇ If people don't have knowledge and skills > this needs to be built on >mentors ?
- ◇ Volunteering / ideas of a viable business (social enterprise)
 - eg creating jobs> as a mutual benefit
 - ↳ What if people can't volunteer?
- ◇ Recycling in Edinburgh; How does the council get how many they educate & engage >that their schemes may not have input meanings behind t > are their graphics clear?
- ◇ Benefits too from challenging Political message - Zero waste is across party agreement > how can this be exploited?
- ◇ There are no reuse targets- hard to measure something that there is nothing to compare against- hard without a standardised system.
- ◇ How do you make remaking mainstream ?
Powerful Mcleithy?? eg I&ZA example ??
STIGMA AROUND SHOPPING SECOND HAND
Challenge of class and status
- ◇ If it was encouraging council & education it would be to do the research prior and create material so that it can be? enacted?

SHUB Vision

Reduce food waste/ redistribute so used by someone (students – food banks and all between)

Swap shop – all 'stuff' reused

Work with WARP-IT, closer collaboration with Remade Edinburgh, longer term contracts certainly

Possibility of replicating swap shop in other towns / parts of Edinburgh

Lifestyle change? can people do well with less stuff altogether?

Accessible to general public

SHRUB Challenges

Food share – health and safety regulations

Buy less – changing consumption behaviour

Finding partners – transport / storage etc

Skills to make things reusable

Expanding to wider communities

Engaging with others doing similar things – unique v. finding niche

Changing attitudes and lifestyles

Soils and Growing Food Vision

Soil that can support us

More market gardens, greenhouses heated by distilleries etc

20% of each farm green houses

BREXIT OPPORTUNITY

Increasing the nutritional quality of food

Improving food security > land reform

Becoming more self sufficient (esp food)

Challenges

Human nature

Producing less/ consuming less

Nutrient loss – either in soil and in the atmosphere

Pasture – grazing – understanding

Market driven agriculture

Brexit opportunities

Agriculture challenge because of farming without good condition
